

ALBIOMA

PRESS RELEASE

PARIS LA DÉFENSE, JANUARY 6, 2014

CYCLONE BEJISA ON RÉUNION

No impact on Albioma's thermal and solar plants

Even as Cyclone Bejisa swept across the island of Réunion on January 2, Albioma's plants continued to operate and to supply power to the local electricity grid. Power generation has been constantly adapted in accordance with the particular technical issues that arise from the cyclone.

Inspections revealed only minor damage to our thermal and solar installations, with no impact on their operational capabilities. These installations are able to generate the amount of electricity required as the power network is fully restored.

Next on the agenda: release (pre-trading) of annual results for the 2013 financial year on March 5, 2014.

ABOUT ALBIOMA

Using its unique expertise in exploiting bagasse (a by-product of sugar cane), ALBIOMA is able to produce electric energy from every type of biomass through a cogeneration process. The Group is also a pioneer of agricultural anaerobic digestion in France. Its ambition is to be recognized as agri-businesses' partner of choice for turning biomass into a highly-effective source of energy without conflict over use. In addition, ALBIOMA develops and operates high-margin solar projects.
